JANUARY 30
The Sky is Falling! All
About Space Junk
Presenter: Dr. Aaron Boley

Space junk:

There are already over 4,000 operational satellites in orbit, which will double in number over the next decade. So what's the issue with having more satellites?
Space junk!

Broken satellites and other space debris accumulate in orbit and pose a serious threat to satellites and humankind's access to space. Mitigating debris is not just a technical challenge, it's a challenge of sharing space.
